HEPA FILTRATION AIR CLEANING DEVICE

## PRODUCT DESCRIPTION

AIRBOX Vortex 9000 is a high-capacity, multi-use, industrial-grade air cleaning system which uses a 4-Stage Filtration System, including Advanced Molecular Adsorbent filters for heavier concentrations of unwanted gases, to provide Equivalent Clean Airflow ( $V_{ACS}$ ) for outdoor and indoor install types. The Vortex 9000 utilizes a multi-stage filtration configuration designed to target and reduce high levels of airborne particulates/aerosols and molecular contaminants such as VOCs (volatile organic compounds), in commercial and industrial environments. The AIRBOX Vortex 9000 is equipped with the AirBox Advanced Operating System (AOS) platform, which allows AIRBOX units to run on differing schedules and keeps track of actual filter life and other maintenance needs, and a direct drive ECM Fan for maximized efficiency. In addition, the VORTEX 9000 qualifies the space for ASHRAE Standard 62.1 IAQP (Indoor Air Quality Procedure) through the use of air cleaning with recirculation, which could allow for a reduction in the amount of outdoor air required and HVAC energy if all specified Design Compounds (DCs) are maintained below their design limits specified in ASHRAE Standard 62.1.
